

Error Log — Great Barrier Reef Starfish Detection

Model: final YOLO checkpoint (final.pt) | Test set: known positive-labeled validation images | Confidence threshold: 0.01

Image	Predicted	Actual	Why (error)
 0-258	1 starfish (conf 0.015)	1 starfish	Low confidence
 2-4721	No detection	1 starfish	Missed detection
 0-161	1 starfish	1 starfish	Correct detection
 1-6850	3 starfish	3 starfish	Correct detection
 0-40	1 starfish	1 starfish	Correct detection

Summary: 4 out of 5 known-positive images were correctly detected. One image (0-258) was only detected at a very low confidence score (0.015), suggesting the model is uncertain in borderline cases. One image (2-4721) was fully missed, indicating the model can still fail on some real starfish frames.
